INFORMAL EXPERIMENT NOTES

What happened in our 10-diagram test?

Synthetic Finnish-context figures | 83 nodes | 113 edges | 206 printed text regions

The short version

Blind vision matched 4 of 10 source graphs without a scored mismatch.

Some source links overlap or pass behind nodes, so not every mismatch is a visible model error.

Approach matrix

Each rate uses 206 source items. OCR rows score printed text; vision scores exact source JSON graph elements.

Approach	Scored	Events / 206	Exact matches	Key result
RapidOCR PP-OCRv6 Finnish	Text	**18 (8.7%)**	4 / 10	203/206 exact; 15 extra boxes
PaddleOCR PP-OCRv5 Finnish	Text	**59 (28.6%)**	0 / 10	187/206 exact; 40 extra boxes
Older RapidOCR baseline	Text	**61 (29.6%)**	0 / 10	145/206 exact; 0 extra boxes
Blind Codex vision	Graph	**26 (12.6%)**	4 / 10	101/113 source edge records exact

What were the 26 source-graph mismatches?

These five non-overlapping scorer categories come from the item-level ledger.

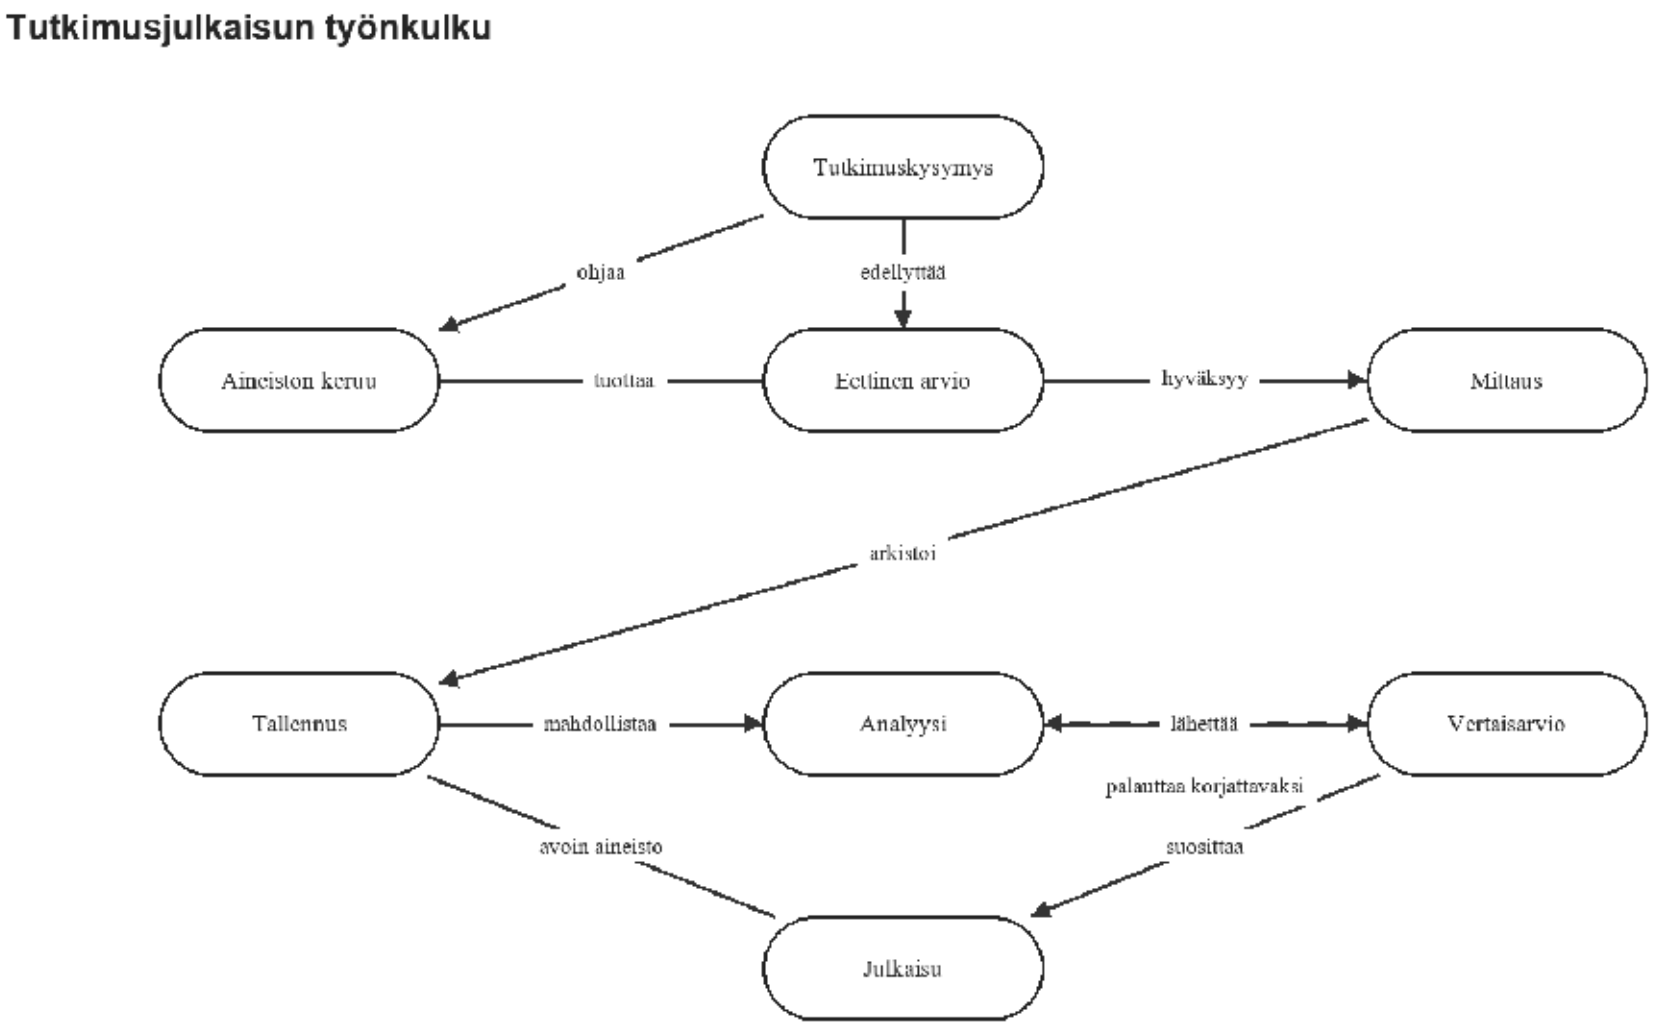

Problem	Count	What happened
Wrong node shape	10	Pill nodes were called rounded rectangles.
Source edge not separate	8	A JSON edge was not separate in the prediction; some overlap links.
Extra endpoint pair	4	Predicted endpoints differ from source JSON; some lines are ambiguous.
Edge label mismatch	2	The label assigned to a matched edge differs from source JSON.
Direction encoding mismatch	2	Opposing source edges overlap; a visible arrow may still be present.

OCR errors: Rapid had 3 source-text misses or misreads + 15 unmatched boxes; Paddle 19 + 40; old Rapid 61 + 0.

These rates need visual source-graph adjudication before they can estimate vision reliability. OCR-only does not infer links.

ONE EXAMPLE

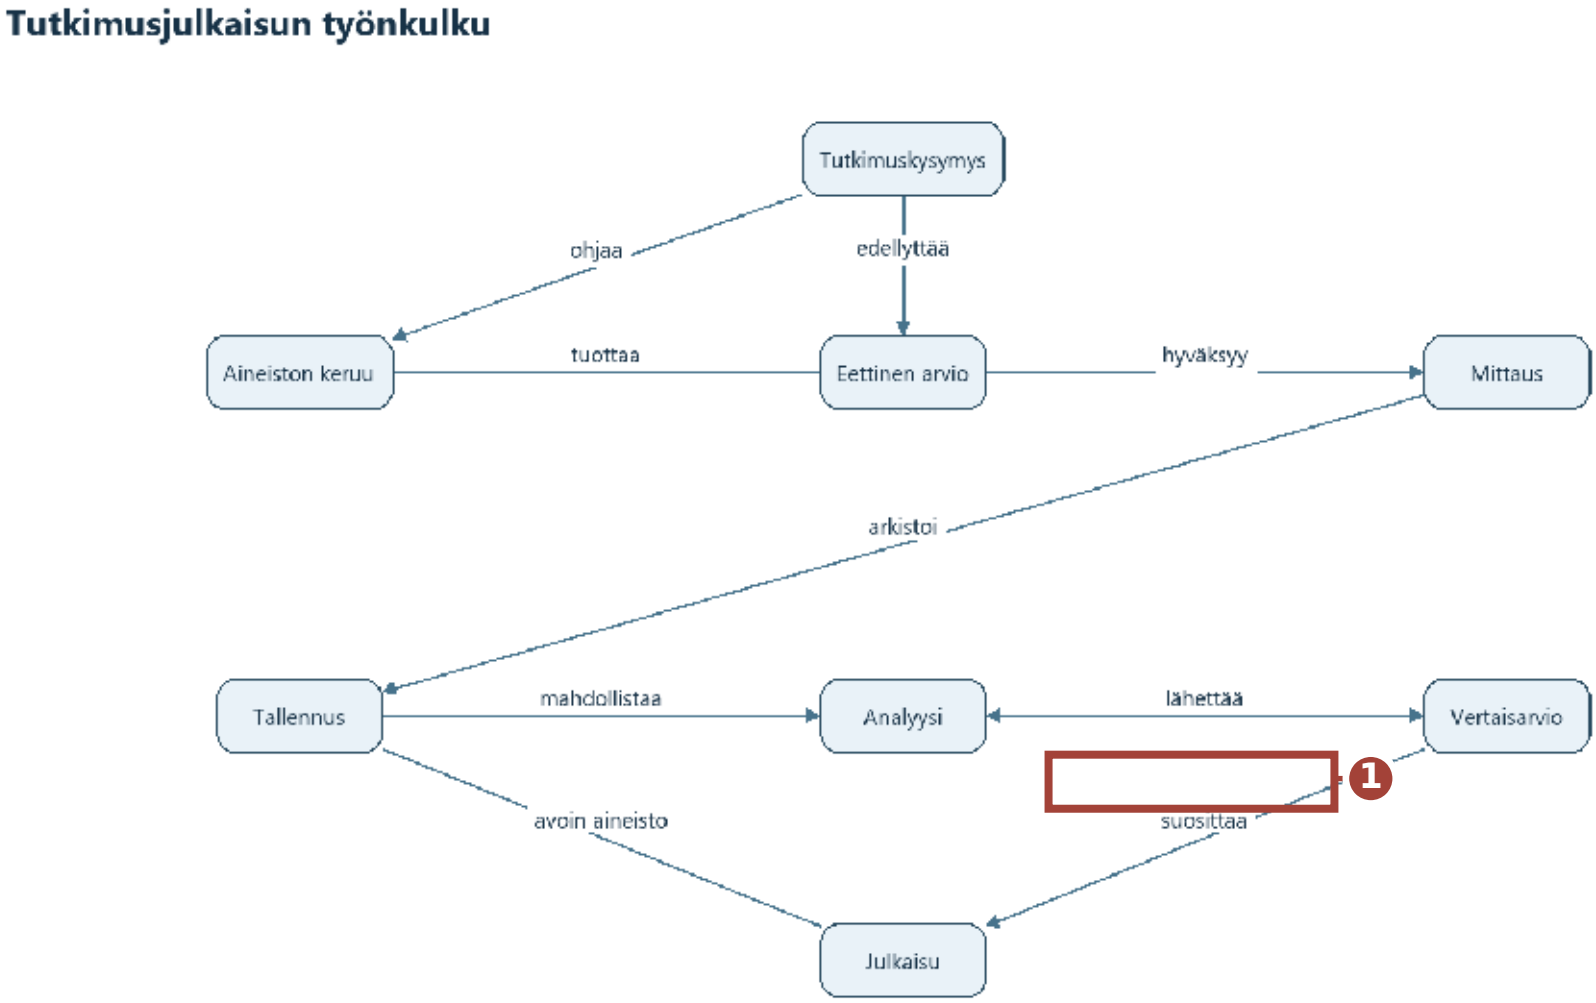

Example source figure

Source graph: 8 nodes and 10 edges, with pill-shaped nodes, arrowless and directed links.

ONE EXAMPLE - RED MARKS A VISIBLE OMISSION

Blind vision reconstruction

1 The source prints a second relationship here: palauttaa korjattavaksi. The reconstruction omits that label.

The left-pointing arrowhead is visible in both images; it was wrong to mark it as a visual arrow error.

Other strict source-graph mismatches here involve overlapping lines. Node-shape differences are unmarked.
