INFORMAL EXPERIMENT NOTES

Our graph-reading test: corrected rerun

10 clean, synthetic Finnish-context figures | 83 nodes | 105 edges | 198 printed text regions

Why we reran it

Eight old source edges were hidden or coincident, making some v3 graph 'errors' visually uncheckable.
The new source images pass text visibility and basic edge-geometry checks.

Approach matrix

Same 198 source items in every row; OCR rows test text, graph rows test reconstructed elements.

Approach	Task	Events / 198	Exact figures	Node text	Edge text
RapidOCR PP-OCRv6 Finnish	OCR text	**16 (8.1%)**	6/10	0	2
PaddleOCR PP-OCRv5 Finnish	OCR text	**57 (28.8%)**	1/10	0	19
Older RapidOCR baseline	OCR text	**60 (30.3%)**	0/10	17	36
Blind Codex vision	Graph	**16 (8.1%)**	8/10	0	0
Blind Codex + RapidOCR	Graph	**8 (4.0%)**	9/10	0	0
Vision + deterministic OCR evidence	Graph	**16 (8.1%)**	8/10	0	0

What did the error events mean?

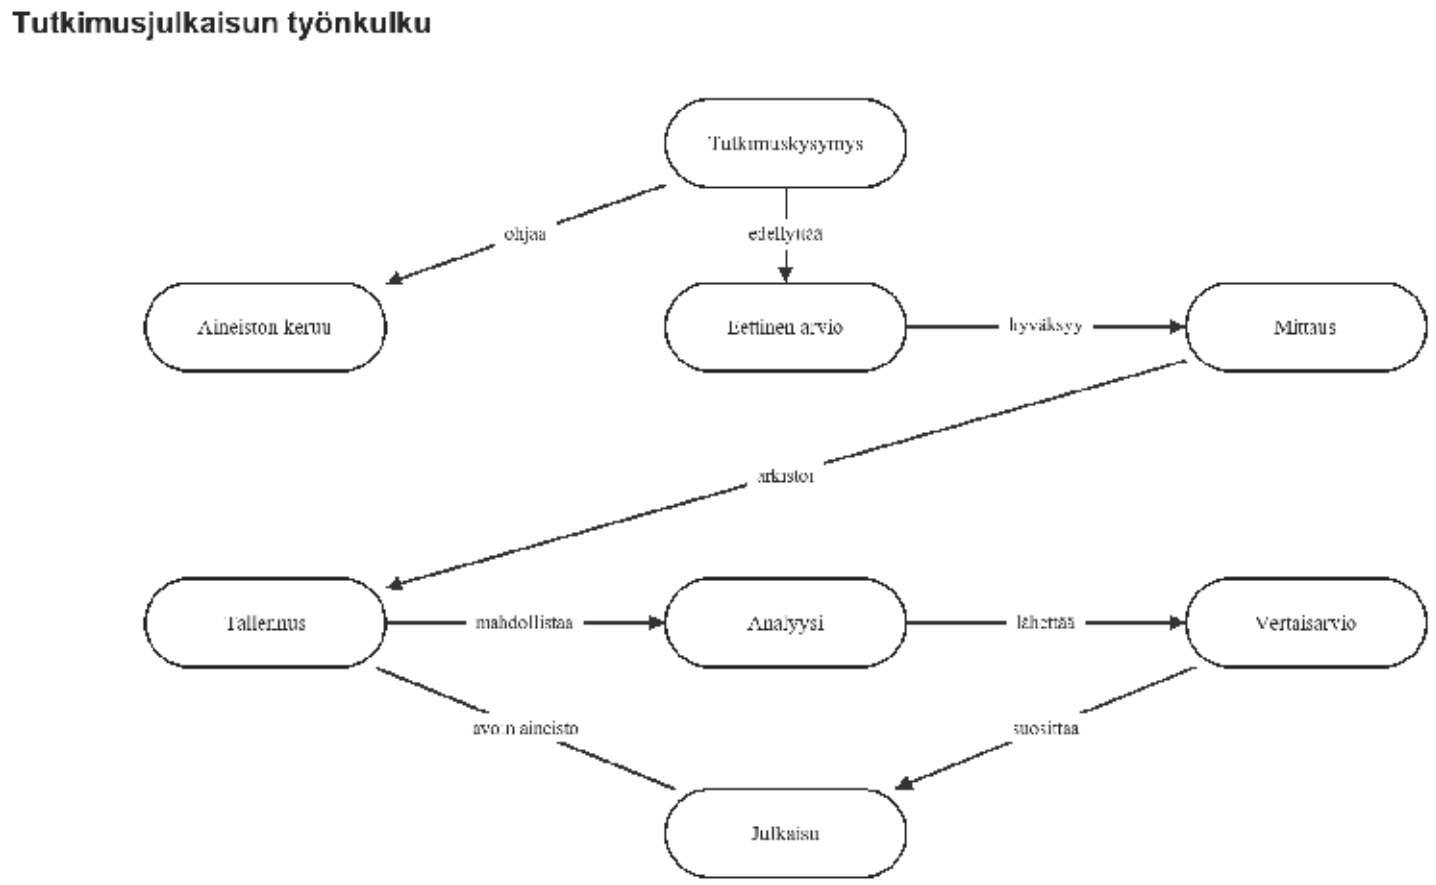
RapidOCR	2 edge-label misreads/misses + 14 unmatched text boxes
PaddleOCR	19 edge-label misreads/misses + 38 unmatched text boxes
Old OCR	7 title + 17 node + 36 edge text errors
Blind vision	16 strict shape-category mismatches; no text or edge-record mismatch
Blind OCR + vision	8 strict shape-category mismatches; 8 arrowless links left semantically unknown

All 105 visible edge records matched in both fresh blind runs under the corrected visual rubric.

EXAMPLE FROM THE CORRECTED SET

Corrected source figure

Research-publication workflow; the reconstruction was saved before scoring.



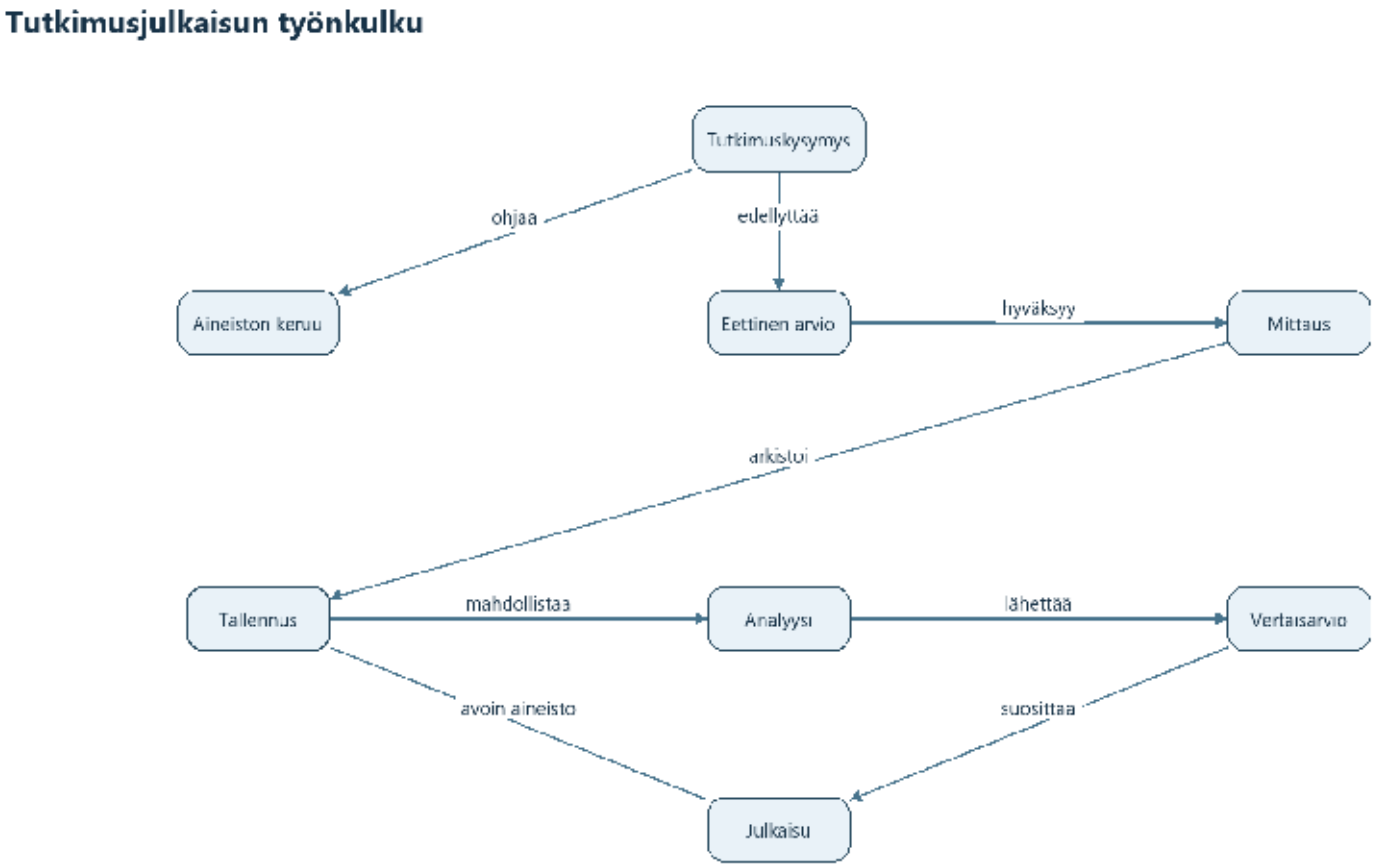
The v3 version contained an overlapping extra link. This v4 source shows only visually checkable edges.

The earlier v3 error counts are superseded. This clean synthetic set cannot establish a universal error rate.

EXAMPLE FROM THE CORRECTED SET

Blind vision reconstruction

Research-publication workflow; the reconstruction was saved before scoring.



Graph text and edges match this source; strict shape coding differs for its rounded nodes.

The earlier v3 error counts are superseded. This clean synthetic set cannot establish a universal error rate.
